Education

Expected Dec 2026 **Brigham Young University - Idaho**, Rexburg, ID

- Bachelor of Science in Computer Science
- Minor: Web Development
- Concentration: Machine Learning
- GPA: 3.9/4.0

Experience

Software Engineer Intern

Upcoming April 2026 **The Church of Jesus Christ of Latter-day Saints**, Salt Lake City, UT

- Migrating the existing Angular codebase to React, with also consuming existing API's
- Helping with database design and query optimization.

System Developer

May 2025 - Present **Brigham Young University Idaho**, Rexburg, ID

- Automated BYUI Support Center workflows and maintained legacy Java Spring Boot applications.
- Developed Team Dynamix iPaaS solutions, reducing manual intervention by 50%.
- Implemented Genesys support and troubleshoot complex system issues in production environments.
- Streamlined internal processes.

Software Engineer Intern

May 2025 - Jul 2025 **Vivacity Tech PBC**, St. Paul, MN

- Maintained and enhanced the customer-facing application for managing device telemetry and incident reporting.
- Developed new features using React.js, Express.js, Redis, and PostgreSQL that automated incident reporting, improving response efficiency.
- Collaborated with a cross-functional team in an Agile development using Jira and Confluence.

SQL Teaching Assistant

Apr 2024 - Present **Brigham Young University Idaho**, Rexburg, ID

- Mentor 100+ students in advanced SQL, database design, and optimization, contributing to 20% higher success rates.
- Conduct weekly lab sessions and provide one-on-one tutoring on complex database concepts.

Frontend Developer Intern

Sep 2024 - Nov 2024 **UpUnikSelf Inc.**, Dover, DE

- Built responsive B2B platform with Next.js and TypeScript, integrating 100+ database tables.
- Optimized performance: 40% reduced API latency, 30% smaller bundle size, and 35% faster queries.
- Implemented responsive design and worked with backend teams to design efficient API endpoints.

Projects

Ev-Resilience (Freelance) - Data Collection IoT Platform

Expected Dec 2026

- Engineered a full-stack IoT platform using a Java Spring Boot RestAPI Backend and a Vue.js frontend with TailwindCSS and Pinia.
- Architected a real-time data ingestion system using Mosquitto MQTT, storing data in a PostgreSQL database configured with a Primary/Replica architecture for scalability.
- Implemented Redis caching to optimize data retrieval and a robust, role-based access control system.

Ev-Resilience (Freelance) Corporate Landing Page

- Designed and developed a responsive landing page using modern Vue.js frontend and TailwindCSS.
- Integrated a serverless backend with Cloudflare Workers to manage API endpoints and automate dynamic functions like contact form submissions.
- Implemented a component-based architecture and managed application state with Pinia.

FloorBooking Student Housing Finder

- Developed a collaborative floor booking platform for students, simplifying the apartment search and application process.
- Utilized SvelteKit for the frontend and Supabase (BaaS) for real-time data management, authentication, and file storage.
- Architected a GraphQL API to provide a single, flexible endpoint for data fetching, reducing over-fetching and improving application speed.

MovieDB Movie and TV Guide

- Developed a Vue.js web app with TMDB API integration, optimized caching, and reduced load times by 30%.
- Implemented modular architecture and CI/CD pipeline deployment on Netlify with a responsive design.
